

# UK/EU Cosmetic CPSR and PIF

Global regulatory service coverage for cosmetic safety assessment readiness, Product Information File organization, INCI review, allergen documentation, label comments, claim evidence, responsible-person handover, and UK/EU cosmetic notification support.

Brand	Coverage	Contact
ALKEMIST - Expert Pro Verified	All countries / country-specific regulatory support	admin@alkemist.org

## Service Overview

ALKEMIST provides a professional UK/EU Cosmetic CPSR and PIF support service for cosmetics and personal care brands, manufacturers, exporters, importers, distributors, private-label companies, Amazon/ecommerce sellers, and regulatory documentation teams. The service is worldwide-first and can be mapped to a specific country route when a local regulation, importer, marketplace, language, authority, or buyer expectation needs to be addressed.

The service page positions this gig under Global Regulatory Service Coverage and describes it as CPSR and PIF data organization, INCI and allergen review, product claims evidence register, responsible-person handover, and UK/EU cosmetic readiness mapping. Delivery is remote with optional meeting support, a typical response within 24 hours, and an estimated delivery window of 5-18 working days depending on formula complexity and available evidence.

## What This Service Covers

- CPSR and PIF readiness index for a defined cosmetic product or product family.
- Formula review using INCI names and percentage ranges where available.
- Ingredient, allergen, warning, claim, label, and restricted-substance review notes.
- Responsible Person and UK/EU notification handover guidance.
- Missing-data checklist covering formula, raw material SDS, specifications, COA, GMP/test evidence, label artwork, claims, product photos, packaging, and target market details.
- Country-specific regulatory mapping plus international framework alignment where relevant.
- Editable summary and PDF-ready file for client, supplier, marketplace, buyer, or management use.

## Who Needs This Service

- Cosmetic and personal care brands planning UK or EU market access.
- Manufacturers preparing CPSR/PIF data before assessor review.
- Importers and distributors needing a clean cosmetic compliance handover file.
- Amazon and ecommerce sellers responding to marketplace cosmetic document requests.
- Private-label buyers needing supplier-chain evidence organization.

- Exporters preparing product, label, formula, and safety documentation for international buyers.

## UK/EU Cosmetic Compliance Context

For EU cosmetics, the Cosmetic Product Notification Portal (CPNP) is the official online notification system created for implementation of Regulation (EC) No 1223/2009. The European Commission states that once a product is notified in CPNP, no further national notification is needed within the EU. For the UK, GOV.UK provides a separate Submit Cosmetic Product Notification (SCPN) route for cosmetic product notification before products are placed on the market.

ALKEMIST helps organize the supporting evidence and readiness file. This does not replace the legal role of the Responsible Person, qualified safety assessor, official notification account holder, or local regulatory professional where required.

## Core CPSR and PIF Readiness Areas

Area	ALKEMIST Review Focus
Formula & INCI	Full formula by INCI and percentage, ingredient identity, functions, allergens, fragrance data, colorant/preservative notes, and missing supplier evidence.
CPSR Evidence	Assessor-ready evidence organization, toxicological data gaps, product use profile, exposure inputs, safety data, and sign-off status.
PIF Organization	Document index, file naming, product description, method of manufacture/GMP evidence, proof of claimed effect, animal testing statement where applicable, and supporting records.
Label & Claims	Warnings, instructions, responsible-person details, batch/lot, PAO/expiry, claims evidence, language route, and marketplace/buyer comments.
Notification Handover	CPNP/SCPN readiness notes, responsible-person handover, target market details, product category, and product photos/artwork.

## Client Input Requirements

- Target country or countries and intended sales route.
- Product name, category, use instructions, target user, warnings, claims, and product photos.
- Full formula by INCI and percentage, or ingredient list if the formula is not yet complete.
- Raw material SDS, specifications, COA, fragrance allergen certificate, colorant and preservative data, and restricted-substance notes.
- Label artwork, packaging details, batch/lot information, PAO/expiry, stability and microbiology data where available.
- Responsible Person details, manufacturer/importer details, target market, notification route, and qualified assessor/t toxicologist sign-off status.
- Marketplace, authority, importer, distributor, or buyer messages where the file is being prepared for a case response.

## Packages and Delivery Model

Package	Best For	Typical Delivery	Included
Basic Cosmetic Gap Scan	One defined product, listing, formula, label, appeal, or document gap needing clear direction.	2-4 working days after complete inputs unless urgent scope is confirmed.	One product route scan, country/international checklist, missing-file notes, and risk-priority comments.
Standard CPSR PIF Pack	Marketplace submission, distributor onboarding, cosmetic file preparation, SDS/label handover, or audit-ready documentation.	4-8 working days after complete inputs.	Country-specific checklist, framework notes, document index, upload-ready wording, editable file, and PDF-ready summary.
Premium UK EU Cosmetic File	Cross-border launches, multi-SKU files, supplier-chain review, urgent recovery, or management-level planning.	7-15 working days after complete inputs.	Multi-country route map, priority risk log, evidence register, supplier follow-up list, controlled revision handover, and meeting support.

## Fulfillment Workflow

1. Intake	Collect product route, formula, label, supplier files, product photos, target market, deadline, and any marketplace/authority request.
2. Evidence Sorting	Separate assessor-ready CPSR evidence from general PIF organization and identify what still needs qualified safety assessor sign-off.
3. Technical Review	Review INCI order, allergens, restricted substances, warnings, claims, product category, packaging, batch/PAO/expiry, and notification data.
4. Readiness Output	Deliver CPSR/PIF readiness index, missing-data list, label comments, claim evidence notes, and notification handover guidance.
5. Revision Support	Provide structured revision coordination based on the selected package and client-provided updates.

## Important Service Boundary

This service prepares regulatory documentation support from client-supplied information and recognized framework requirements. It is not a legal opinion, government registration, customs clearance, marketplace approval guarantee, or substitute for a licensed local regulatory professional or qualified cosmetic safety assessor where one is required. Final legal responsibility, registration, notification, product placement, and authority decisions remain with the responsible company and relevant authority or provider.

## Final Deliverables

- UK/EU Cosmetic CPSR and PIF readiness checklist and service report.
- Local regulation mapping notes for the selected country or country group.
- International framework alignment notes for cosmetic, INCI, label, claims, SDS, REACH/CLP, WHMIS, IATA/IMDG, or marketplace route where applicable.
- Missing-file register, risk flags, file naming guide, and submission/handover wording.
- CPSR/PIF readiness index, INCI/allergen notes, restricted-substance questions, label/claim comments, and responsible-person notification handover notes.
- Editable summary and PDF-ready client file.

## Why Choose ALKEMIST

- Worldwide remote service with country-specific mapping when needed.
- Practical documentation workflow for brands, factories, buyers, distributors, and marketplace sellers.
- Clear separation between readiness organization, assessor sign-off requirements, and final responsible-person obligations.
- Structured handover files that help clients understand what is ready, what is missing, and what needs further expert/local sign-off.
- Professional response and revision coordination for international cosmetic compliance projects.
